NexStock

Five-Finding Fix Retest

12 November 2026 | Production | Nexstock QA Company | Chromium / Windows
Phase 1 and Phase 2 | https://nexstock.stylotech.mu/app

Outcome

Four of the five tickets can close. P2-DOC-004 is partially fixed: the original neutral-colour override is corrected, but one minor rendered-text contrast boundary remains.

Ticket / phase	Result	Verified result
RET-002 Phase 1	FIXED	Settings header/bank text reaches the PDF. Builder notes take precedence; blank/whitespace notes fall back without changing the saved template.
RET-003 Phase 1	FIXED	Normal Add to order clicks pass at 1920 x 1080 and 1440 x 900, and the item appears in the cart.
P2-QUOTE-002 Phase 2	FIXED	Customer Notes, terms, discounted totals and identity reach the quotation PDF. Status and one-time conversion pass.
P2-DOC-004 Phase 2	PARTIAL	Brand borders and native PDF colour are fixed. Dark text tint is 2.991:1 on the actual #13191b surface, narrowly below the stated 3:1.
REL-DN-001 Phase 2	FIXED	New and legacy debit documents/PDFs retain product name and SKU. Legacy resource IDs are strings and the print route works.

Remaining bugs and follow-up

Keep P2-DOC-004 open at Low priority. The selected #17675e keeps exact borders; text becomes #236f66. On the actual #13191b surface its contrast is 2.991:1. Calculate the tint against the rendered surface and verify the result stays at or above 3:1. Invoice, quotation and credit-note occurrences are one ticket.

Regression checks

PDF Settings fallback, builder precedence, whitespace fallback and saved-template isolation pass. Internal till invoice notes stay off the customer PDF. A readable brand-colour control is unchanged. New and previously broken legacy debit output pass.

Execution and cleanup

Final composite: 19 functional passes, 1 application-failing case, and 10 setup/cleanup passes. No skipped/blocked cases or unresolved automation errors. All 79 offline guard/contrast/classification checks pass.

QA stock, VAT, invoice text and document template were restored and verified. Synthetic QA financial records remain as evidence. No real payment, external invitation/email or physical print job was sent.

Deployment and limits

Production serves index-Bw0A9VIv.js, changed from 5 November. This verifies the frontend fingerprint; no authoritative deployed Git commit was supplied. Browser checks do not certify PHP unit tests, tenant-isolation enforcement without foreign fixtures, all reasonCode length boundaries, mobile or physical hardware.
