NexStock

Release Fix Retest Summary

4 November 2026 | Production | Nexstock QA Company | Chromium / Windows Phase 1 Round 2, separate Help fix and Phase 2 release claims

Outcome

Retesting is complete. Five confirmed application issues remain, including one additional debit-document finding. The user confirmed that Classic dark mode must preserve the chosen brand colour.

Scope	Reviewed outcome
Phase 1 Round 2 - 4 tickets	2 fixed (RET-001, RET-004); RET-002 partially fixed; RET-003 open.
Separate Help fix	HELP-001 fixed: public Terms/Privacy work on desktop and mobile without submitting login.
Phase 2 - 24 addressed tickets	21 fixed; 3 partially fixed. Another 10 tickets were explicitly not included by the developer.

Confirmed issues and required follow-up

Ticket	Remaining behaviour	Required follow-up
RET-002 Partial	Invoice PDFs omit the saved Company Settings header and banking/payment notes. Downloads and invoice identity work.	Connect the retained settings to PDF export and define configuration precedence.
RET-003 Open	Variant content covers the Add to order footer at 1920 x 1080 and 1440 x 900.	Constrain the scrolling viewport and keep the footer readable and clickable.
P2-QUOTE-002 Partial	Customer-facing Notes persist/display on the quotation but are missing from its PDF. Terms, discounts and conversion work.	Include the saved quotation Notes in the customer PDF.
P2-DOC-004 Partial	Classic dark invoice, quotation and credit-note views replace the chosen brand colour. Modern and native Classic PDF colour work.	Preserve the configured brand colour in Classic dark views.
REL-DN-001 Additional	The corrected debit print route opens, but its selected product appears as Item 4 with no SKU.	Preserve product name and SKU in debit-line persistence/view mapping.

Explicit partial delivery

P2-CN-004: partial/final refunds and balance checks pass. Credit allocation is explicitly not delivered; refund date/method history is not certified.

Execution and scope

Final scoped cases: 58 passed, 8 application-failing cases (5 unique issues). No policy checks remain blocked. All 38 setup/cleanup checks and 76 local safety/classification checks pass. Automation errors were corrected and rerun; no final scoped case was intentionally skipped.

Captured QA stock, VAT, invoice branding, document template and notification preferences were restored. Synthetic records remain as evidence. This is web verification; mobile, legal approval, cross-company isolation and an authoritative deployed commit are not certified.
